Intelligent Energy Management Platform

GridManager

By EVO Power

Intelligent Energy Management Platform

Faster Path to Value

GridManager™ helps bring battery energy storage assets online faster, unlock revenue opportunities sooner and optimise performance throughout the asset lifecycle. Monitor, control and adapt system operation to maximise returns and align performance with your energy objectives.

Power & Visibility in Your Hands

Monitor, control and optimise your Battery Energy Storage Systems (BESS) and distributed energy assets through a single, intuitive platform, delivering real-time insights, remote access and intelligent energy management.

Australian Engineered, Designed & Supported

Grid Manager™ is proudly developed in Australia, purpose-built for local energy applications, operating conditions and compliance requirements.

Cyber Secure & Hosted in Australia

Built on a secure, data-sovereign architecture, Grid Manager™ helps protect critical operational data while supporting the reliability and resilience of modern energy infrastructure.

GridManager

EMS

Asset Control, Operation and Market Access

Market Access & Revenue Optimisation

Connect with Virtual Power Plants (VPPs), energy retailers and market participants to unlock revenue opportunities and maximise the commercial value of your BESS.

Powerful Control Software

Advanced real-time control, optimisation and energy management to maximise BESS performance and asset value.

Seamless & Deep Integration

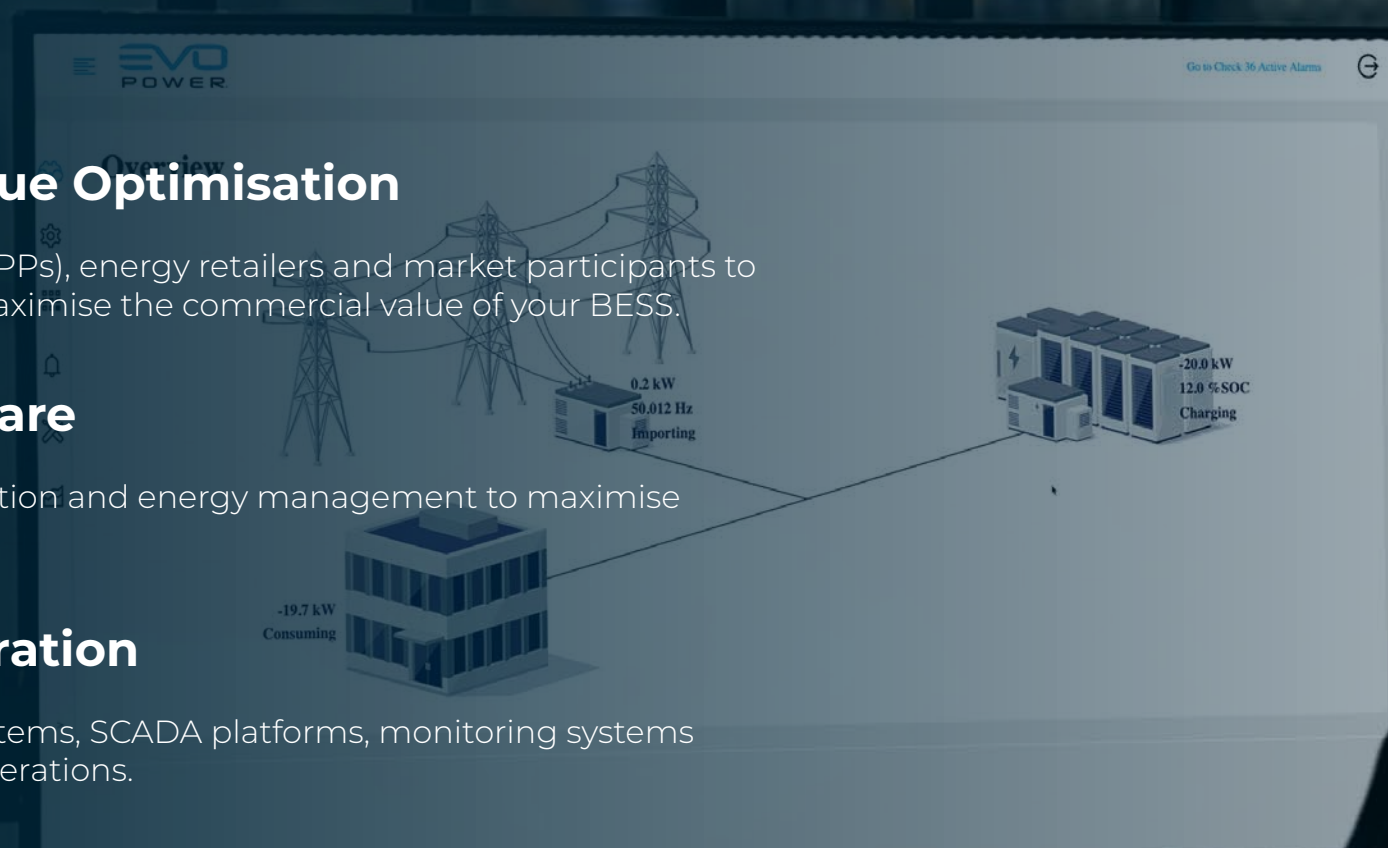

Connects effortlessly with battery systems, SCADA platforms, monitoring systems and grid networks for streamlined operations.

Local Australian Support

Engineered and supported in Australia by experts who understand local energy markets, compliance requirements and operating conditions.

Premium Features

A comprehensive suite of advanced tools delivering enhanced visibility, operational intelligence, reliability and performance.

GridManager

EMS

Asset Control, Operation and Market Access

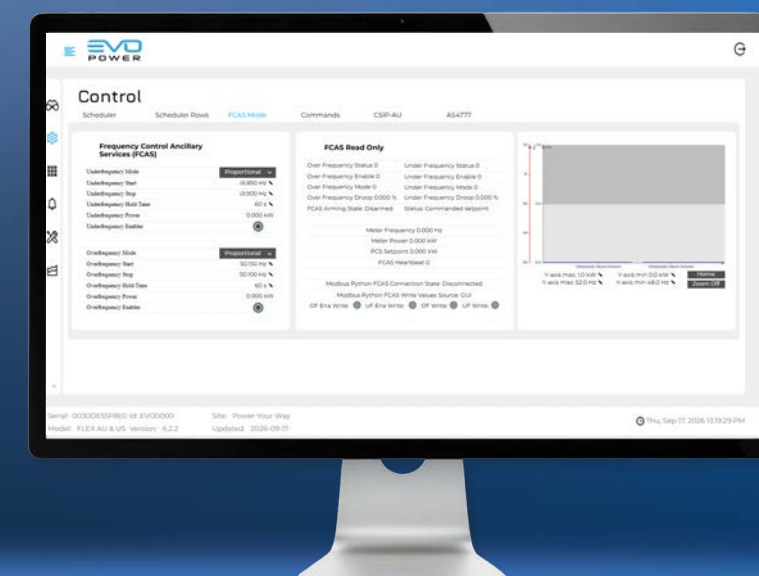

Compliance & Security

Maintain system integrity with secure access controls, cybersecurity protection, grid code compliance and integrated safety functions

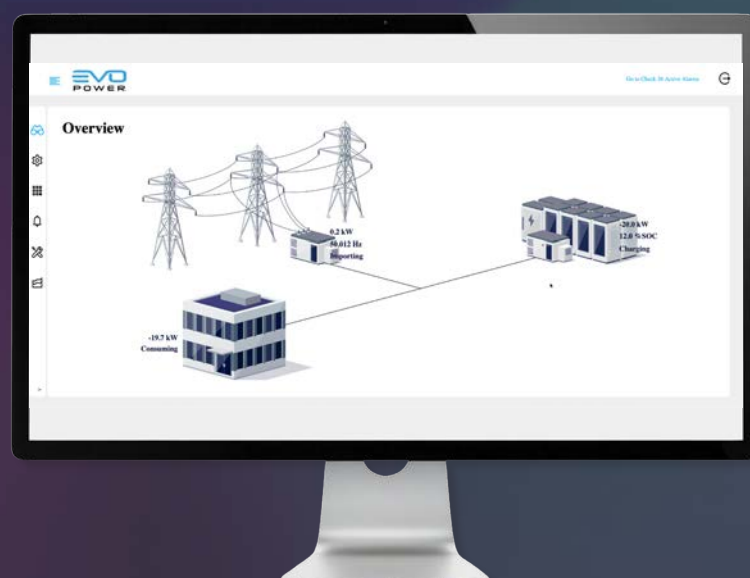

Operational Intelligence

Track performance, state of charge, alarms and asset health with advanced analytics, automated reporting and actionable insights.

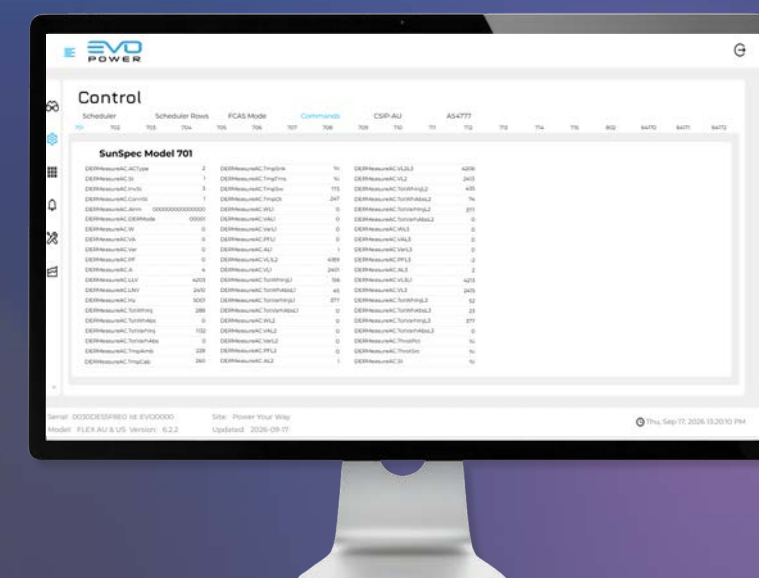

Asset Control

Real-time monitoring and control of battery systems, power conversion equipment, metering, PV and site assets through a single intelligent platform.

Market Access & Integration

Unlock participation in wholesale energy, FCAS, FFR and network services with seamless integration to SCADA, VPP and optimisation platforms.

GridManager

INSIGHT

Asset Visibility, Performance and Health

Advanced Monitoring & Deep Diagnostics

Gain real-time visibility of BESS and distributed energy assets, with detailed performance monitoring, asset health tracking, diagnostics and reporting through a single intuitive dashboard.

Performance Warranty Reporting

Track key operational and performance metrics that provide insight into system performance against warranty obligations, helping identify issues early and support long-term asset performance.

Seamless Integration

Connect effortlessly with energy assets and operational systems, enabling efficient data flow, improved visibility and intelligent energy management.

Local Support & Uptime Management

Designed, engineered and supported in Australia, Grid Manager™ Insight delivers expert local support while helping maximise system availability, reliability and operational performance.

Cyber Secure

Protect critical energy infrastructure with secure remote access and a cyber-secure, data-sovereign architecture designed to keep operational data safe and under control.

GridManager

INSIGHT

Asset Visibility, Performance and Health

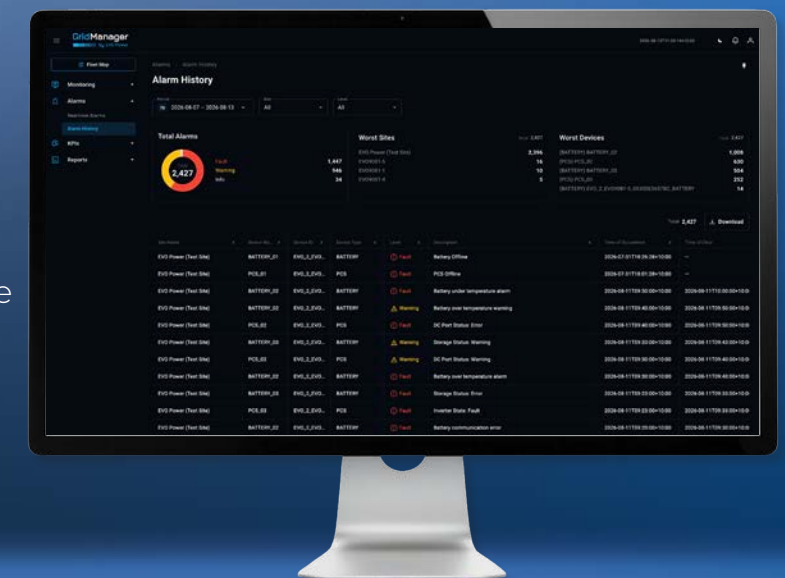

Fleet-Wide Visibility

Monitor multiple sites and assets through a single, centralised platform. Gain a complete view of performance, energy flows, operating conditions and asset health across your fleet.

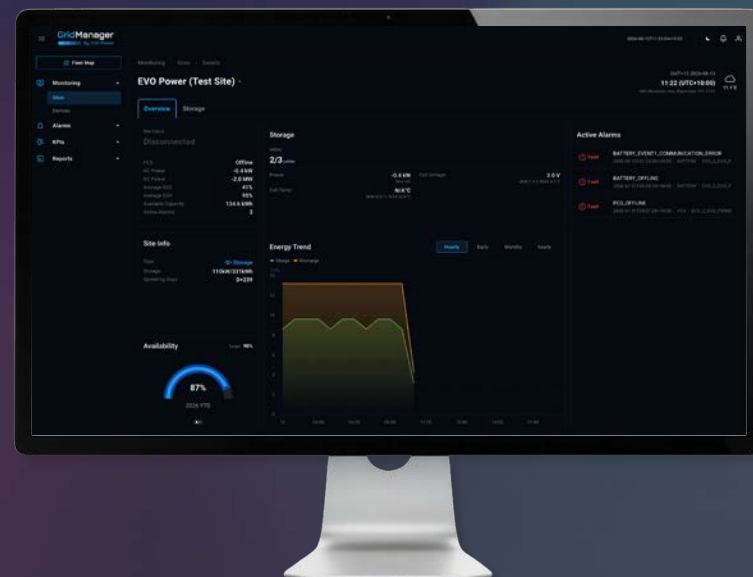

Intelligent Alarm Management

Respond faster with real-time alerts, event tracking and historical alarm analysis. Identify recurring issues, reduce downtime and support proactive maintenance.

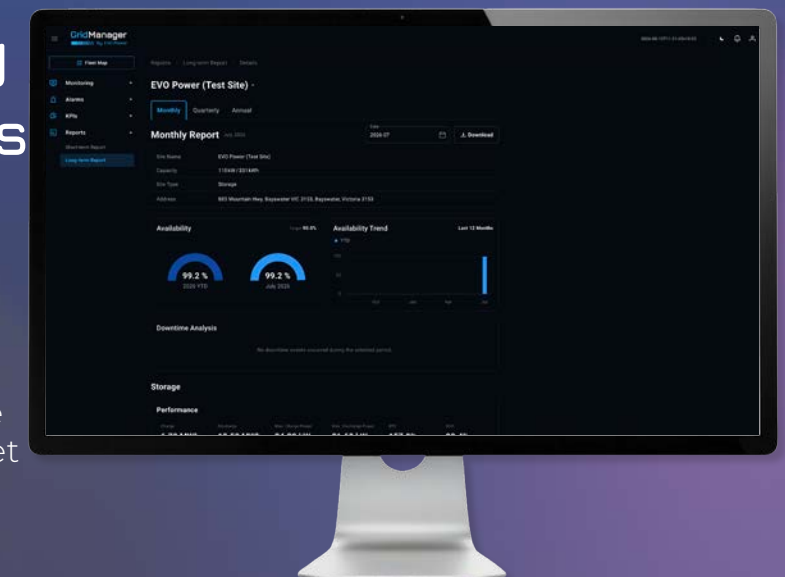

Real-Time Monitoring

Access live system data and operating status at any time. Drill down to individual assets and components for detailed performance insights and diagnostics.

Automated Reporting & Advanced Analytics

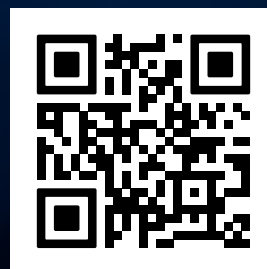

Gain real-time visibility into system performance, asset health and key operational KPIs through automated reporting and advanced analytics. Monitor critical performance metrics, support warranty compliance and make data-driven decisions that optimise asset performance and reliability.
